

AI Content Analysis

Turn your content into meaningful educational metadata.

Analyzing educational content takes time, especially when you are working with hundreds or thousands of resources. AI Content Analysis uses AI designed for education to examine your content and identify the information your team needs for standards alignment, discovery, and organization.

From Content to Usable Metadata

Educational concepts

Built to Understand Educational Content

General-purpose AI can identify words and patterns. EdGate's AI Content Analysis is designed around the language of education, academic standards, and the terminology used by publishers and educators.

It looks beyond basic keywords to identify the educational concepts and instructional information within your content.

What **AI Content Analysis** Helps You Do

Reduce Manual Metadata Creation

Spend less time reading through individual resources and manually identifying subjects, topics, objectives, and other educational information.

Analyze Content at Scale

Process large collections of URLs instead of working through resources one at a time.

Create a Stronger Starting Point

Give your alignment team richer information to work with before beginning standards correlation.

Make Existing Content More Discoverable

Create consistent educational metadata that can help organize and describe your content.

Keep Your Team in Control

AI provides the first pass, while your team can review and refine the information as part of the ExACT workflow.

A Starting Point for **Smarter Alignment** with AutoAlign

AI Content Analysis

Analyzes your content and creates meaningful educational metadata.

EdGate Taxonomy

Organizes educational concepts and relationships.

AutoAlign

Uses identified concepts to generate standards alignment recommendations for review.

Human Review

Your team reviews and finalizes the work.

Your Content. Your Data. Your Control.

Your content stays protected within EdGate's secure, in-house AI environment.

EdGate never uses your content to train AI models, and all processing takes place within our in-house controlled environment, never on public or external AI systems.
