ExACT AutoAlign

AI-Assisted Standards Alignment at Scale

Turn educational content into standards alignment recommendations faster, while keeping your team in control.

exact by edgate

Scale Your Alignment Without Scaling the Work

ExACT AutoAlign uses AI and the EdGate Taxonomy to identify relevant educational concepts and generate standards alignment recommendations across large collections of content. Your team reviews and refines the recommendations before they become part of the final alignment.

AI-Assisted Alignment

Use AI to identify relevant educational concepts and generate alignment recommendations based on the EdGate Taxonomy.

Align at Scale

Process large collections of educational resources instead of manually identifying potential standards connections one resource at a time.

One-to-Many Alignment

Concepts are mapped to relevant state and national standards, helping organizations reuse alignment work across multiple standards sets.

Human Review Built In

AI provides recommendations, but your team remains in control. Review, accept, refine, or remove suggested concepts and alignments before finalizing.

Connected to the EdGate Standards Repository

Work with EdGate's extensive collection of machine-readable standards and the EdGate Taxonomy to support alignment across state and national standards.

How AutoAlign Works

1. **Start With Your Content**
   Provide the metadata or analyzed content information for your educational resources.
2. **Identify Educational Concepts**
   AutoAlign uses AI and the EdGate Taxonomy to identify concepts relevant to each resource.
3. **Generate Alignment Recommendations**
   Those concepts are connected to relevant standards in the EdGate repository.
4. **Review and Refine**
   Your team reviews the recommendations and accepts, removes, or refines them.
5. **Apply Your Alignments**
   Approved concepts and alignments become part of your finished resource metadata and alignment work.

Need help creating the metadata first?

ExACT's AI Content Analysis analyzes your content URLs and generates educational metadata such as subjects, topics, grade levels, learning objectives, descriptions, and key terms. That information can then be used within ExACT to support correlation and, when AutoAlign is enabled, alignment recommendations.

Flexible Ways to Use AutoAlign

Within ExACT

Use AutoAlign as part of the ExACT Standards Alignment Platform to analyze and align content alongside your existing workflow.

Through API Integration

Connect AutoAlign capabilities directly to your existing systems and workflows through API access.

Ready to simplify standards alignment?
